Training

Training – CipherSchools

June 2024 – August 2024

MongoDB, Express.js, React.js, Node.js, Tailwind CSS, SQL

- Owned end-to-end delivery of a full-stack blogging platform during a structured traineeship, incorporating engineering feedback from senior developers across weekly design and code reviews.
- Delivered a full-stack enterprise applications on schedule across two-week Agile sprints by implementing REST APIs, JWT authentication, and React Hooks state management, maintaining 100% sprint deliverable completion through daily standups and retrospectives.
- Authored setup, API, and deployment documentation for the blogging platform and internal tooling, reducing onboarding time for incoming trainees.

Projects

AI Music Generation SaaS – github.com/Abhishek764/ACE-step-music-gen

January – March 2026

Next.js 15, TypeScript, FastAPI, AWS (EC2, S3, Lambda), Modal, HuggingFace, Inngest, BetterAuth

- Built a cloud-native SaaS that generates original music from text prompts by orchestrating 3 generative AI models (ACE-Step, Qwen2-7B, Stability AI SDXL-Turbo), deployed on AWS EC2, S3, and Lambda.
- Cut generation wait time by 40% under peak load by engineering a serverless GPU pipeline on Modal backed by Inngest async job queues, and designed credit-based REST APIs with BetterAuth for subscription billing.

AskMedi: RAG Medical Agent – github.com/Abhishek764/AskMedi

October – November 2025

Python, LangChain, OpenAI, Pinecone, Flask, AWS, REST APIs, SQL

- Improved response accuracy by 35% over a keyword-search baseline by building a RAG-powered agent that retrieves source-grounded data from a structured medical corpus to recommend medicines for diagnosed symptoms.
- Achieved sub-2-second response latency across 500+ test queries by designing a relational schema in PostgreSQL and writing SQL queries for persistent session management, deployed on Render.

Blogging Website – github.com/Abhishek764/blogging-website-backend

June 2024 – August 2024

Node.js, Express.js, React.js, MongoDB, JWT

- Engineered an object-oriented backend using Express controller and Mongoose model classes to power JWT-secured authentication, CRUD post management, and a comments/likes system.
- Structured the React front end into modular, reusable component classes for post creation, comments, and the rich text editor, applying object-oriented composition patterns for maintainability.
- Validated end-to-end content lifecycle across 50 onboarded test users with Jest-based integration tests covering auth, post-creation, and engagement flows.

Skills

- Languages:** Java, Python, TypeScript, JavaScript (ES6+), SQL, C++
- Frameworks & Libraries:** Next.js, React.js, Node.js, Express.js, FastAPI, Tailwind CSS
- Databases:** PostgreSQL, SQL, MongoDB, Redis
- Cloud & DevOps:** AWS (EC2, S3, Lambda), Docker, CI/CD
- APIs & Auth:** REST API, JSON, JWT, OAuth
- Engineering:** Agile/Scrum, OOP, Data Structures & Algorithms, Debugging, Code Review, Technical Documentation, Git

Open Source Contributions

Open Library (Internet Archive) – PR #12853 (Merged)

June 2026

JavaScript (ES6+), Python, FastAPI, Jest | Closes issue #12848

- Diagnosed a cross-thread race condition in FastAPI partials causing `render_once` to skip `i18n` injection for lazily-loaded carousels; fixed by embedding `i18n` strings per-carousel and updating `Carousel.js` with a fallback chain.
- Added a Jest unit test covering the fix, passing all 3 test cases with a clean ESLint run.

Open Library (Internet Archive) – PR #12507 (Merged)

May 2026

Python | 6,500+ GitHub stars, 1,900+ forks

- Refactored 14 files across the core library and scripts modules, replacing deprecated string-trimming helpers with native Python standard-library methods, closing tracked issue #12503.

Education

Bachelor of Technology in Computer Science – Lovely Professional University, Phagwara

May 2026

CGPA: 7.1/10

Certifications & Achievements

- Cloud Computing – NPTEL** (Nov 2024): AWS services, distributed computing, and cloud architecture fundamentals.
- Data Structures & Algorithms in C/C++** (Feb 2024): Advanced algorithms and optimization techniques.
- Competitive Programming:** Solved 500+ problems across LeetCode, GeeksforGeeks, HackerRank, and CodeChef.
