Open Source Contributions

Open Library (Internet Archive) – PR #12507 (Merged) May 2026

Python; 6,500+ GitHub stars, 1,900+ forks

- Refactored 14 files across the core library and scripts modules, replacing deprecated string-trimming helpers with native **Python** standard-library methods; code reviewed, approved, and merged by maintainers, closing tracked issue #12503.

Open Library (Internet Archive) – PR #12853 (Merged) Jun 2026

JavaScript (ES6+), Python, FastAPI, Jest; Closes issue #12848

- Diagnosed a cross-thread race condition in **FastAPI** partials where **web.ctx** (a **web.py** **ThreadedDict**) caused **render_once** to skip **i18n** injection for lazily-loaded carousels; embedded **i18n** strings per-carousel in **data-config** and updated **Carousel.js** with a prioritized fallback chain, restoring localized loading labels and eliminating the freeze.
- Added a **Jest** unit test covering the **data-config** path with no hidden input; all 3 test cases pass with a clean **ESLint** run.

Taining

Software Engineering trainee Jun 2024 – Aug 2024

CipherSchools — **MongoDB, Express.js, React.js, Node.js, Tailwind CSS, SQL**

- Built a full-stack blogging platform with **JWT**-secured user authentication, **CRUD** post management, a rich text editor, and a comments/likes system; onboarded 50 test users and validated end-to-end functionality across the complete content lifecycle.
- Developed and deployed 3 full-stack enterprise applications with **REST APIs**, **JWT** authentication, and **React Hooks** state management, completing all deliverables across 3 two-week **Agile** sprints with daily standups and sprint retrospectives.
- Shipped responsive, mobile-first UIs in **React.js** and **Tailwind CSS** with **CI/CD** pipelines on **AWS**; conducted peer code reviews on all merged PRs, achieving 99% uptime across production deployments.

Projects

Retail Microservices Platform – github.com/Abhishek764/Retail-Microservices-Platform Jan 2026 - Jan 2026

Terraform, AWS (EKS, VPC, IAM, KMS), Kubernetes, Helm, ArgoCD, GitOps, NGINX, Docker

- Provisioned a production-pattern **AWS EKS** platform end-to-end with **Terraform** – VPC across 3 AZs, EKS in Auto Mode, and a customer-managed **KMS** key – using reusable community modules instead of manual setup.
- Automated the **GitOps** bootstrap by installing **ArgoCD** via Terraform's **Helm** provider and applying its sync configuration as code, enabling a single **terraform apply** to stand up a self-syncing, self-healing deployment.
- Deployed 5 containerized microservices (**Java**, **Go**, **NestJS**) behind an **NGINX** ingress controller and AWS NLB, each packaged as an independent **Helm** chart with its own **HPA** and **PodDisruptionBudget**.

Starbucks DevSecOps CI/CD Pipeline – github.com/Abhishek764/starbucks-website-deployment Dec 2025 - Jan 2025

Jenkins, Docker, Kubernetes (EKS), SonarQube, Trivy, Prometheus, Grafana

- Built a **Jenkins CI/CD** pipeline that gates every deployment on static code analysis (**SonarQube**) and container vulnerability scanning (**Trivy** – filesystem and image) before promotion.
- Containerized a **React** application with **Docker** and deployed it to **AWS EKS** (provisioned via **eksctl** with **IAM** **OIDC** federation and an autoscaling managed node group) via **kubect1** from the pipeline.
- Instrumented the deployment with **Prometheus** (blackbox and node exporters) and **Grafana** dashboards, and automated **Jenkins** email notifications with attached security-scan reports on every build.

Skills

Cloud & Infrastructure: AWS (EKS, VPC, EC2, IAM, KMS, S3, NLB), Terraform, **eksctl**, Linux

Containers & Orchestration: Docker, Kubernetes, Helm, HPA, PodDisruptionBudget

CI/CD & GitOps: Jenkins, ArgoCD, GitOps, Git, GitHub

Security & Quality: SonarQube, Trivy, Static Code Analysis, Vulnerability Scanning

Monitoring & Observability: Prometheus, Grafana, Blackbox Exporter, Node Exporter

Networking & Ingress: NGINX Ingress Controller, Load Balancing, DNS, SSL/TLS

Languages & Scripting: Python, Java, Shell/Bash, TypeScript, JavaScript, SQL, C++

Databases: MySQL, MongoDB, Redis

Engineering Practices: Agile/Scrum, REST APIs, Unit Testing, Debugging, Code Review

Education

Lovely Professional University, Phagwara

Bachelor of Technology in Computer Science

May 2026

CGPA: 7.1/10

Certifications & Achievements

Cloud Computing – NPTEL (Nov 2024): AWS services, distributed computing, and cloud architecture fundamentals.

Data Structures & Algorithms in C/C++ (Feb 2024): Advanced algorithms and optimization techniques.

Competitive Programming: Solved 500+ problems on LeetCode, GeeksforGeeks, HackerRank, and CodeChef.
